

Database Programming

Store your data in local or server databases such as SQL Server and Oracle using comprehensive data access techniques such as OLEDB and ODBC. Perform data collection, inventory tracking, defect tracking and downtime monitoring. Use data mining techniques to create customized reports and realize plant efficiency with Statistical Process Control (SPC) reports. Manage the lifetime of your data to provide accurate and constructive feedback that complies with industry standards. Implement Manufacturing Execution Systems (MES) integrated with your plant control system and Enterprise Resource Planning (ERP) system.

The control requirements were defined and fine tuned as the project progressed and Interstates' flexibility in meeting our needs are appreciated.

-A Midwest Flour Milling Company

SERVICES:

Database Servers

- Microsoft® SQL Server™
- Microsoft Access
- Oracle™
- IBM DB2
- Sybase®

Database Design & Maintenance

- Custom Report Development
- System Integration
- Data Management
